

## Module 1 - Introduction

ME3023 - Measurements in Mechanical Systems

May 29, 2020

### Topic 2 - Types of Variables

## Topic 2 - Types of Variables

- Measured Variable
- Independent and Dependent Variables
- Controlled Variables and Parameters
- Extraneous Variables
- Engineering Example

# Measured Variable

“A **measurement** is an act of assigning a specific value to a physical variable. That physical variable is

Text: Theory and Design of Mech. Meas.

# Independent and Dependent Variables

“If a change in one variable will not affect the value of some other variable, the two are considered independent of each other. A variable that can be changed independently of other variables is known as an \_\_\_\_\_. A variable that is affected by changes in one or more other variables is known as a \_\_\_\_\_. Normally, the variable that we measure depends on

Text: Theory and Design of Mech. Meas.

## Controlled Variables and Parameters

“A variable is \_\_\_\_\_ if it can be held at a constant value or at some prescribed condition during a measurement...  
...complete control of a variable is not usually possible. We use the adjective \_\_\_\_\_ to refer to a variable that can be held as prescribed, at least in a nominal sense...

...we define a \_\_\_\_\_ as a functional grouping of variables. For example, a moment of inertia or a Reynolds number...  
...A \_\_\_\_\_ that has an effect on the behavior of the measured variable is called a control parameter....”

Text: Theory and Design of Mech. Meas.

## Extraneous Variables

“Variables that are not or cannot be controlled during measurement but that affect the value of the variable measured are called \_\_\_\_\_. Their influence can confuse the clear relation between cause and effect in a measurement... ..The effects due to \_\_\_\_\_ can take the form of signals superimposed onto the measured signal with such forms as **noise** and drift.”

Text: Theory and Design of Mech. Meas.

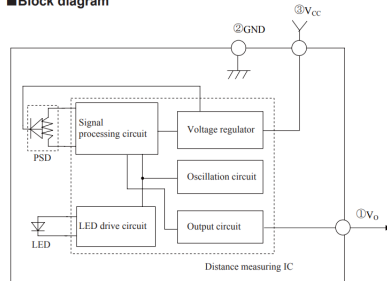

## Engineering Example

### SHARP I.R. Ranger - Distance Sensor

## Engineering Example

Consider the IR distance ranger, name at least one physical variable for each of the following categories.

- Measured Variable
- Independent Variable
- Dependent Variables
- Controlled Variables
- Extraneous Variables
