Lecture Module - Error and Uncertainty

ME3023 - Measurements in Mechanical Systems

Mechanical Engineering
Tennessee Technological University

Module ? - Error and Uncertainty

Module? - Error and Uncertainty

- Topic 1 Accuracy and Error
- Topic 2 Errors, Residuals, and Uncertainty
- Topic 3 Repeatability and Testing

Topic 1 - Accuracy and Error

- Accuracy and Error
- Estimating Error
- Uncertainty Interval
- GPS Activity

Accuracy and Error

The exact value of a variable is	s called the
The value of the	variables as indicated by a
measurement system is called	the The
of a measurement	refers to the closeness of agreement
between the measured value as	nd the true value. But the
is ra	rely known, and various
influences, called,	have an effect on both of these
values. So the concept of the	of a measurement is a
one.

Uncertainty Interval

"The	is a numerical estimate of the possible range of
the error in a	measurement. In any measurement, the
i:	not known exactly since the true value is rarely
known exactly	. But based on available information, the operator
might feel coi	ifident that the error is within certain bounds, a plus
or minus rang	e of the indicated reading. This is the assigned

We will discuss this again the the *Uncertainty Module*.

Uncertainty Interval

Experiment: We are going to collect data with the sensor suite on our phones.

Sensor:

- GPS concept graphic
- info from manufacturer

Logger Apps:

- sensorlogger (Android) Kelvin Choi
- Sensor Logger (OSX) -Choi Tsz Hei

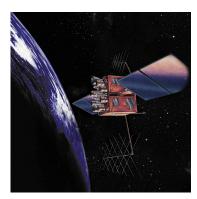

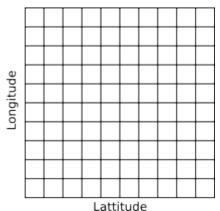

Image:Wikipedia

Part 1 - Informed Prediction: Generate data you expect the GPS in your phone to report. Show the data points on the graph to the right.

lmage: thill

Part 2 - Measurement: Record GPS from your phone. Show the data points on the graph to the right. You can use export feature in Sensor Logger to report the data.

Image: thill

Part 3 - Analysis/Results/Conclusions: Compare and contrast the two sets of data. What conclusions can you make about your predictions or the sensor data?

Were the predictions reasonable?

 What type of error is present in the recorded data?

 What should be used as a reference for this data?

Image: wikipedia Image: wikipedia

Deliverables:

- Dataset files (.csv)
 - control set (fixed position) include 'control' in filename
 - activity set 1 include activity label in filename
 - activity set 2 include activity label in filename
- Answers to all discussion questions
- MATLAB code generated during activity (.m)
- Figures generated during activity (.m)

Topic 2 - Errors, Residuals, and Uncertainty

- Random and Systematic Errors
- Dart Board Example
- Types of Errors
- Sample Uncertainty Data

Random and Systematic Errors

"Errors are effect:	s that cause a measured v	alue to differ from its
true value	error causes a	variation in
measured values 1	ound during repeated mea	asurements of a variable.
error	causes an offset between	the mean value of the
data set and its t	rue value. Both	and
error	s affect a system's accurac	cy."
		=

Text: Theory and Design of Mech. Meas.

Random and Systematic Errors

Dart Board Example

"The concept of accuracy and the effects of _____and ___errors in instruments and measurement systems can be illustrated by the throw of darts."

(a) High repeatability gives low random error but no direct indication of accuracy.

(b) High accuracy means low random and systematic errors.

(c) Systematic and random errors lead to poor accuracy.

The ability of a measurement system to indicate the same value on repeated but independent application of the same input provides a measure of the instrument ."

Text, Image: Theory and Design of Mech. Meas.

Types of Errors

Common categories of errors in measurements are shown below. This is not an exhaustive list.

- Linearity Error
- Sensitivity
- Zero (offset) Error
- Hysteresis Error
- Overall Instrument Error

$$u_c = \sqrt{u_1^2 + u_2^2 + \dots + u_M^2}$$

Types of Errors

Types of Errors

Types of Errors

Sample Uncertainty Data

 Table 1.1
 Manufacturer's Specifications: Typical Pressure Transducer

Operation	
Input range	$0-1000 \text{ cm H}_2\text{O}$
Excitation	$\pm 15 \text{ V DC}$
Output range	0–5 V
Performance	
Linearity error	$\pm 0.5\%$ FSO
Hysteresis error	Less than $\pm 0.15\%$ FSO
Sensitivity error	$\pm 0.25\%$ of reading
Thermal sensitivity error	$\pm 0.02\%$ /°C of reading
Thermal zero drift	$\pm 0.02\%$ /°C FSO
Temperature range	0–50 °C

FSO, full-scale operating range.

Topic 3 - Repeatability and Testing

- Instrument Repeatability
- Conditions for Repeatability
- Reproducibility and Instrument Uncertainty
- —

Instrument Repeatability

"The ability of a measurement system to indicate the same value on repeated but independent application of the same input provides a measure of the instrument repeatability. Specific claims of repeatability are based on multiple calibration tests (replication) performed within a given lab on the particular unit."

$$\% u_{R_{max}} = rac{2s_x}{r_0} imes 100$$

Text: Theory and Design of Mech. Meas.

Instrument Repeatability

Conditions for Repeatability

The following conditions need to be fulfilled in the establishment of repeatability:

- the same experimental tools
- the same observer
- the same measuring instrument, used under the same conditions
- the same location
- repetition over a short period of time.
- same objectives

Text: Wikipedia(NIST)

Reproducibility and Instrument Uncertainty

"The term reproducibility, when reported in instrument specifications, refers to the closeness of agreement in results obtained from duplicate tests carried out under similar conditions of measurement

... The term instrument precision, when reported in instrument specifications, refers to a random uncertainty based on the results of separate repeatability tests."

Text: Theory and Design of Mech. Meas.
